MAXUS CHAIR

Infection Control

Fully upholstered design eliminates the “niches” between cushions and chair frames for easy wipe down between patients and better infection control. No exposed hinges or hardware.

Conforming Lumbar Support

The thick, foam rubber lumbar cushion conforms to each patient for individual comfort and support.

Adjustable Headrest

Can be extended up to 5” for the taller patients or removed for the shorter patients.

Extra Thin Back

Allows unobstructed access to the field of operation.

Automatic Return

Hands-off patient dismissal. Foot Control for hands-off operation.

Durability

Welded steel chassis is the integral component of all chair motion, removing stress from patient load-bearing parts.

Headrest

The headrest has a slot for pony tails. Optional horseshoe headrest & articulating headrest.

Seat

The seat has soft edges for ease of entrance and exit.

Colors

Available in over 100 standard colors.

Options Available

- Ultra Leather
- Over or under carpet height-adjustable cantilevered base. Power base
Computer bracket, light pole, stainless steel tray and arm, etc.

The Ross Difference

At Ross, we believe that the patient treatment chair should be functional, attractive and offer a long, dependable life. It is, after all, where your patients spend most of their time. Each Ross chair is custom built to your specifications. There are no additional charges for use of the widest variety of upholstery colors. Upholstery is stitched with **French Seams**, not molded. And at Ross, we build in quality where you can't see it, using industrial-grade heavy duty mechanical components that are built to last.

The bottom line on the Ross difference is simple - value and service.

“...The concept has been time tested, the design fine-tuned and backed by over 40 years of experience...”
